DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities:

The terms “low-molecular weight” in the specification are not clearly defined.

How low is “low” should be clearly defined because the high-molecular weight range is defined from 500 to 20000 (see page 6, lines 10), however, both of two diacrylate formulae II and III have molecular weight more than 500.

The notations “n” and “m” in high-molecular weight materials I and IV are not defined

Also, the label for “Diacrylate III” is missing on third structure formula.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. See the explanation in section 1 above.
3. Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claims contain subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which

it is most nearly connected, to make and/or use the invention. See page 3, lines 6-13 in the present specification. The disadvantage of the prior art (WO 00/34808) is the fact that when low-molecular weight materials are used, which is the present invention intend to improve by using low-molecular weight. Also, the prior art use the same diacrylate (Fig. 2A and Fig. 2C) as low-molecular weight and copolymer (Fig. 2F) as high-molecular weight of the present invention. Applicants should clearly address what are the difference between the present invention and the prior art.
